Liquid Chromatography: Chapter 9. Size-Exclusion Chromatography A.M. Striegel

Size-exclusion chromatography (SEC) is used for the characterization and/or separation of macromolecules. Size-based sampling of column pore volume provides information in terms of the molar mass averages and distributions of disperse polymers. The history of the development, the basic theory of column separations, calibration, and detection strategies for obtaining absolute molar mass information are described, as are modern multidetector techniques and the incorporation of SEC into two-dimensional liquid chromatographic arrangements.
