## **Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology)**

Esmail Et Al Jabbari

Global warming, pollution, food and water shortage, cyberspace insecurity, over-population, land erosion, and an overburdened health care system are major issues facing the human race and our planet. These challenges have presented a mandate to develop “natural” or “green” technologies using nature and the living system as a guide to rationally design processes, devices, and systems. This approach has given rise to a new paradigm, one in which innovation goes hand-in-hand with less waste, less pollution, and less invasiveness to life on earth. Bioinspiration has also led to the development of technologies that mimic the hierarchical complexity of biological systems, leading to novel highly efficient, more reliable multifunctional materials, devices, and systems that can perform multiple tasks at one time. This multi-volume handbook focuses on the application of biomimetics and bioinspiration in medicine and engineering to produce miniaturized multi-functional materials, devices, and systems to perform complex tasks. Our understanding of complex biological systems at different length scales has increased dramatically as our ability to observe nature has expanded from macro to molecular scale, leading to the rational biologically-driven design to find solution to technological problems in medicine and engineering.

The following three-volume set covers the fields of bioinspired materials, electromechanical systems developed from concepts inspired by nature, and tissue models respectively.

Volume 1: Bioinspired Materials

Volume 2: Electromechanical Systems

Volume 3: Tissue Models

The first volume focuses on the rational design of nano- and micro-structured hierarchical materials inspired by the relevant characteristics in living systems, such as the self-cleaning ability of lotus leaves and cicadas' wings; the superior walking ability of water striders; the anti-fogging function of mosquitoes' eyes; the water-collecting ability of Namib Desert Beetles and spider silk; the high adhesivity of geckos' feet and rose petals; the high adhesivity of mussels in wet aquatic environments; the anisotropic wetting of butterflies' wings; the anti-reflection capabilities of cicadas' wings; the self-cleaning functionality of fish scales; shape anisotropy of intracellular particles; the dielectric properties of muscles; the light spectral characteristics of plant leaves; the regeneration and self-healing ability of earthworms; the self-repairing ability of lotus leaves; the broadband reflectivity of moths' eyes; the multivalent binding, self-assembly and responsiveness of cellular systems; the biomineral formation in bacteria, plants, invertebrates, and vertebrates; the multi-layer structure of skin; the organization of tissue fibers; DNA structures with metal-mediated artificial base pairs; and the anisotropic microstructure of jellyfish mesogloea. In this volume, sensor and microfluidic technologies combined with surface patterning are explored for the diagnosis and monitoring of diseases. The high throughput combinatorial testing of biomaterials in regenerative medicine is also covered.

**From reader reviews:**

**Heather Sessoms:**

Precisely why? Because this Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) is an extraordinary book that the inside of the e-book waiting for you to snap that but latter it will distress you with the secret the idea inside. Reading this book alongside it was fantastic author who also write the book in such incredible way makes the content inside of easier to understand, entertaining method but still convey the meaning thoroughly. So , it is good for you for not hesitating having this anymore or you going to regret it. This phenomenal book will give you a lot of benefits than the other book have such as help improving your ability and your critical thinking technique. So , still want to postpone having that book? If I had been you I will go to the book store hurriedly.

**Ronald Hopkins:**

Your reading 6th sense will not betray an individual, why because this Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) publication written by well-known writer we are excited for well how to make book which can be understand by anyone who read the book. Written in good manner for you, still dripping wet every ideas and producing skill only for eliminate your own personal hunger then you still uncertainty Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) as good book not only by the cover but also with the content. This is one e-book that can break don't ascertain book by its include, so do you still needing an additional sixth sense to pick this kind of!? Oh come on your reading through sixth sense already alerted you so why you have to listening to a different sixth sense.

**Adam Gutierrez:**

Many people spending their time frame by playing outside with friends, fun activity with family or just watching TV the whole day. You can have new activity to pay your whole day by reading a book. Ugh, think reading a book will surely hard because you have to use the book everywhere? It alright you can have the e-book, delivering everywhere you want in your Cell phone. Like Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) which is finding the e-book version. So , why not try out this book? Let's find.

**Lorene Williamson:**

Is it a person who having spare time in that case spend it whole day through watching television programs or

just resting on the bed? Do you need something totally new? This Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) can be the response, oh how comes? The new book you know. You are so out of date, spending your free time by reading in this brand new era is common not a geek activity. So what these guides have than the others?
