Retinoblastoma (Pediatric Oncology)

Retinoblastoma (Pediatric Oncology)

Although rare, retinoblastoma has been at the forefront of cancer research and treatment for the last three decades. In the developed world, eye preservation has become a priority, while in developing countries, it has become a major cause of blindness. The two-hit hypothesis of oncogenesis, proposed by Alfred Knudson, provided the conceptual framework for tumor suppressor gene research and led to the discovery of the retinoblastoma pathway. In this book, we have invited a team of experts to address all those important aspects of retinoblastoma: the treatment of children with retinoblastoma, research and therapy - from biology to epidemiology - provided a model for a modern approach to the cancer patient; state of the art retinoblastoma treatment will be able to continue to provide updates on such exciting subjects.
