Semantic Search over the Web (Data-Centric Systems and Applications)

Semantic Search over the Web (Data-Centric Systems and Applications)

Semantic Search over the Web (Data-Centric Systems and Applications)

The Web has become the world's largest database, with search being the main tool that allows organizations and individuals to exploit its huge amount of information. Search on the Web has been traditionally based on textual and structural similarities, ignoring to a large degree the semantic dimension, i.e., understanding the meaning of the query and of the document content. Combining search and semantics gives birth to the idea of semantic search. Traditional search engines have already advertised some semantic dimensions. Some of them, for instance, can enhance their generated result sets with documents that are semantically related to the query terms even though they may not include these terms. Nevertheless, the exploitation of the semantic search has not yet reached its full potential.

In this book, Roberto De Virgilio, Francesco Guerra and Yannis Velegrakis present an extensive overview of the work done in Semantic Search and other related areas. They explore different technologies and solutions in depth, making their collection a valuable and stimulating reading for both academic and industrial researchers.

The book is divided into three parts. The first introduces the readers to the basic notions of the Web of Data. It describes the different kinds of data that exist, their topology, and their storing and indexing techniques. The second part is dedicated to Web Search. It presents different types of search, like the exploratory or the path-oriented, alongside methods for their efficient and effective implementation. Other related topics included in this part are the use of uncertainty in query answering, the exploitation of ontologies, and the use of semantics in mashup design and operation. The focus of the third part is on linked data, and more specifically, on applying ideas originating in recommender systems on linked data management, and on techniques for the efficiently querying answering on linked data.

From reader reviews:

Patricia Howard:

Why don't make it to become your habit? Right now, try to prepare your time to do the important behave, like looking for your favorite e-book and reading a book. Beside you can solve your long lasting problem; you can add your knowledge by the e-book entitled Semantic Search over the Web (Data-Centric Systems and Applications). Try to face the book Semantic Search over the Web (Data-Centric Systems and Applications) as your good friend. It means that it can for being your friend when you really feel alone and beside those of course make you smarter than in the past. Yeah, it is very fortuned to suit your needs. The book makes you far more confidence because you can know everything by the book. So , we need to make new experience along with knowledge with this book.

Geraldine Davis:

Now a day those who Living in the era everywhere everything reachable by interact with the internet and the resources in it can be true or not call for people to be aware of each info they get. How individuals to be smart in obtaining any information nowadays? Of course the answer is reading a book. Reading a book can help persons out of this uncertainty Information mainly this Semantic Search over the Web (Data-Centric Systems and Applications) book because this book offers you rich data and knowledge. Of course the details in this book hundred percent guarantees there is no doubt in it everbody knows.

Marc Starr:

Hey guys, do you wants to finds a new book to see? May be the book with the concept Semantic Search over the Web (Data-Centric Systems and Applications) suitable to you? Typically the book was written by renowned writer in this era. The actual book untitled Semantic Search over the Web (Data-Centric Systems and Applications)is a single of several books in which everyone read now. This particular book was inspired a lot of people in the world. When you read this guide you will enter the new age that you ever know prior to. The author explained their concept in the simple way, consequently all of people can easily to comprehend the core of this reserve. This book will give you a large amount of information about this world now. To help you to see the represented of the world on this book.

Mark Carlton:

Are you kind of stressful person, only have 10 or perhaps 15 minute in your moment to upgrading your mind skill or thinking skill possibly analytical thinking? Then you are experiencing problem with the book than can satisfy your small amount of time to read it because this all time you only find book that need more time to be study. Semantic Search over the Web (Data-Centric Systems and Applications) can be your answer because it can be read by a person who have those short extra time problems.
